7. In your own opinion, what do you recommend as an improvement to enhance your learning using this system?

Learning materials should be emailed directly to participants after the session

Generally this system is excellent as it has so much given us the opportunity to learn and share experiences in the physical absence of instructor/ presenter which automatically cuts so much costs and saves time as well.

But, since this Application is still new to some of us not all members have the ability to have supportive devices like PCs or smart phones to enable them to participate wherever they are. Majority need to meet to the hospital where there is this complete device that supports Teleconferences perfectly.

WE believe with time this challenge should not be a problem anymore.

Sometimes it's difficult to be connected by using smartphone, and also the effort must be taken to improve the quality of audio

To solve all problems about audio quality

My opinion ,after presentation I supposed to pass through presenter notes and revise again ,to capture well some points .

Internet must be clear all the time Insuring reliable network and speed so that participants can join teleconferences even away from our institution premises.

Your doing 👍 great
